

Class Exercise 2 — Customer and Order

- A company maintains information about its **customers** and the **orders** they place.
- Each customer has a unique **Customer ID**, a **Name** consisting of a **First Name** and **Last Name**, an **Address**, and one or more **Phone Numbers**.
- Each order has a unique **Order ID**, an **Order Date**, and a **Total Amount**.
- A customer may exist in the database **without having placed an order**. However, every order must be placed by **exactly one customer**. A customer may place **many orders** over time.
