

Class Exercise 3 — Customer, Order, and Item

- A company maintains information about its **customers, orders, and items**.
- Each customer has a unique **Customer ID**, a **Name** consisting of a **First Name** and **Last Name**, an **Address**, and one or more **Phone Numbers**.
- Each order has a unique **Order ID**, an **Order Date**, and a **Total Amount**.
- Each item has a unique **SKU**, an **Item Name**, and a **Price**.
- A customer may exist in the database without having placed an order. A customer may place **many orders**, but every order must be placed by **exactly one customer**.
- Every order must contain **at least one item** and may contain many items. An item may appear in **many different orders**, but an item may also exist in the database without ever having been ordered.
- For each item contained in an order, the company records the **Quantity** ordered.
